A quantitative trait locus (QTL) is a region of DNA which is associated with a particular phenotypic trait, which varies in degree and which can be attributed to polygenic effects, i.e., the product of two or more genes, and their environment. These QTLs are often found on different chromosomes. The number of QTLs which explain variation in the phenotypic trait indicates the genetic architecture ...

The class A serves as a base class for the derived class B, which in turn serves as a base class for the derived class C. The class B is known as intermediate base class because it provides a link for the inheritance between A and C. The chain ABC is known as inheritance path.. A derived class with multilevel inheritance is declared as follows:

Ezekiel Chapter 40: Messiah's Millennium Temple. Introduction to Ezekiel 40-48. The next portion of Ezekiel, Chapters 40 to 48, is an area that is not often covered in Christian literature because it can seem confusing. The reason for this confusion is a lack of understanding of the time-period to which the text refers.
