Discovering Structural Equation Modeling Using Stata, by Alan Acock, successfully introduces both the statistical principles involved in structural equation modeling (SEM) and the use of Stata to fit these models. The book uses an application-based approach to teaching SEM.

The second is the structural model, which analyses the structural relationships between variables. The Weighted Least Squares (WLSMV) estimation method (Acock, 2013) was used in all models, given that it does not assume normality and is asymptotically equivalent to maximum likelihood in studies with large samples.

Discovering Structural Equation Modeling Using Stata

'Discovering Structural Equation Modeling Using Stata', Revised Edition is devoted to Stata's sem command and all it can do. Learn about its capabilities in the context of confirmatory factor analysis, path analysis, structural equation modeling, longitudinal models, and multiple-group analysis.

Bechger CITO, Arnhem Abstract This article presents a short and non-technical introduction to Structural Equation Modeling

or SEM.

An Introduction in Structural Equation Modeling

The use of modification indices to guide model modification and computation of direct, indirect, and total effects for full structural equation models are also covered. Chapter 4 details the application of SEM to growth curve modeling.
