

### **double blind pdf**

A blind study is a clinical trial in which the subject or the investigator (or both) are unaware of which trial product/drug the subject is taking.

### **Limitations of the Double-Blind Pharmaceutical Study**

A blind or blinded-experiment is an experiment in which information about the test is masked (kept) from the participant, to reduce or eliminate bias, until after a trial outcome is known. It is understood that bias may be intentional or subconscious, thus no dishonesty is implied by blinding. If both tester and subject are blinded, the trial is called a double-blind experiment.

Pleated blinds are shades made from a pleated fabric (which helps to add texture to a room) that pull up to sit flat at the top of a window to hide from sight when open.. Honeycomb pleated blinds, or cellular blinds (actually cellular shades) are similar to pleated blinds except that they are made up of two or more layers joined at the pleats to form 'cellular' compartments that trap air ...
