Actually, fractional Fourier transform is a rotation operation on the time frequency distribution. From the definition above, for $\hat{\alpha} = 0$, there will be no change after applying fractional Fourier transform, and for $\hat{\alpha} = \pi/2$, fractional Fourier transform becomes a Fourier transform, which rotates the time frequency distribution with $\pi/2$. For other value of $\hat{\alpha}$, fractional Fourier transform ...

In digital signal processing, decimation is the process of reducing the sampling rate of a signal. The term downsampling usually refers to one step of the process, but sometimes the terms are used interchangeably. Complementary to upsampling, which increases sampling rate, decimation is a specific case of sample rate conversion in a multi-rate digital signal processing system.
