A burn is a type of injury to skin, or other tissues, caused by heat, cold, electricity, chemicals, friction, or radiation. Most burns are due to heat from hot liquids, solids, or fire. While rates are similar for males and females the underlying causes often differ. Among women in some areas, risk is related to use of open cooking fires or unsafe cook stoves.

An urban heat island (UHI) is an urban area or metropolitan area that is significantly warmer than its surrounding rural areas due to human activities. The temperature difference usually is larger at night than during the day, and is most apparent when winds are weak. UHI is most noticeable during the summer and winter. The main cause of the urban heat island effect is from the modification of ...

Heat-Related Deaths Among Crop Workers --- United States, 1992--2006 Workers employed in outdoor occupations such as farming are exposed to hot and humid environments that put them at risk for heat-related illness or death.

Heat-Related Deaths Among Crop Workers --- United States

5/10/18 Wind energy results in more warming than Coal does. By John Droz Yesterday a major study was released, that concluded that wind turbines cause more atmospheric warming than using coal does!. There have been other studies that have come to this conclusion (e.g. here), but maybe since this came from Harvard, more people will pay attention to it!
