

### rang and dales pharmacology pdf

In pharmacology, the clearance is a pharmacokinetic measurement of the volume of plasma from which a substance is completely removed per unit time; the usual units are mL/min. The quantity reflects the rate of drug elimination divided by plasma concentration.. The total body clearance will be equal to the renal clearance + hepatic clearance + lung clearance.

### Clearance (pharmacology) - Wikipedia

Dobutamine is a sympathomimetic drug used in the treatment of heart failure and cardiogenic shock. Its primary mechanism is direct stimulation of  $\beta_1$  receptors of the sympathetic nervous system. Dobutamine was developed in the 1970s by Drs. Ronald Tuttle and Jack Mills at Eli Lilly and Company, as a structural analogue of isoprenaline.
