The next prominent seismic activity occurred on 15 and 19 April 2013. The earthquakes had M L of 3.0 and 2.9, respectively, and neither were part of a VT string. The last time isolated VT earthquakes occurred was 28 June and 9 October 2011.

Earthquake prediction is a branch of the science of seismology concerned with the specification of the time, location, and magnitude of future earthquakes within stated limits, and particularly "the determination of parameters for the next strong earthquake to occur in a region. Earthquake prediction is sometimes distinguished from earthquake forecasting, which can be defined as the ...

Soil is a mixture of organic matter, minerals, gases, liquids, and organisms that together support life. Earth's body of soil is the pedosphere, which has four important functions: it is a medium for plant growth; it is a means of water storage, supply and purification; it is a modifier of Earth's atmosphere; it is a habitat for organisms; all of which, in turn, modify the soil.

An unbiased and informed discussion on whether wind turbines cause illness, the possible causes, and how the question might be settled. Turbines annoy some people, they may impact on a very few people's sleep, some people can become anxious about nearby turbines and anxiety can lead on to other symptoms, but does it go beyond that?

The CANDU system is a strong example of safety through both engineered redundancy and passive design. The core has numerous triple-redundant detectors that feed to two logically, conceptually and physically separate shutdown systems (shut-off rods and high-pressure poison injection).
