Chitosan is produced commercially by deacetylation of chitin, which is the structural element in the exoskeleton of crustaceans (such as crabs and shrimp) and cell walls of fungi. The degree of deacetylation (%DD) can be determined by NMR spectroscopy, and the %DD in commercial chitosans ranges from 60 to 100%. On average, the molecular weight of commercially produced chitosan is between 3800 ...

Introduction. The word "fractal" often has different connotations for laypeople than for mathematicians, where the layperson is more likely to be familiar with fractal art than a mathematical conception. The mathematical concept is difficult to define formally even for mathematicians, but key features can be understood with little mathematical background.

where  $s(t)$  denotes the signal,  $T$  is the averaging period and  $N$  is the number of samples for averaging. Details on TSA will not be discussed in this paper. References on details about TSA can be found in the references of [1]. A brief review of TSA was given by Dalpiaz et al. and some drawbacks of TSA were pointed out by Miller [2]. More advanced approaches of time-domain analysis apply time series ...

CYTO-ID<sup>®</sup> Autophagy Detection Kit measures autophagic vacuoles and monitors autophagic flux in lysosomally inhibited live cells using a novel dye that selectively labels accumulated autophagic vacuoles. The dye has been optimized through the identification of titratable functional moieties that allow for minimal staining of lysosomes while exhibiting bright fluorescence upon incorporation ...

The term polymorph has been derived from a Greek word  $\alpha\epsilon\text{poly}$ , which means  $\alpha\epsilon\text{many}$ , and  $\alpha\epsilon\text{morph}$  -  $\alpha\epsilon\text{implying } \alpha\epsilon\text{form}$ . Hence, polymorphism refers to different structural forms of a chemical substance.
